Eagle Use Case Document

Use Case Description	
Summary	Users will find or report eagles based on various parameters.
Actors	Users, Eagle Database
Pre-Conditions	User is not able to locate or store the location of previously located eagles to recall for later use.
Post-Conditions	Sightings are logged and categorized for later use by user and others.
Priority	Medium

Scenario

1. **User is presented an explanation of the application and its importance.**
2. **Check for Report OR Find OR Exit**
   A. **Report Selected:**
      I. **User is asked for County, Type, When, Where, and Size**
   B. **Find Selected:**
      I. **User is asked for County and Type**
   C. **Exit Selected:**
      I. **Returns to the main explanation screen.**
3. **If Report was selected and data entered, data is sent to the database and stored.**
4. **If Find was selected and data was entered, data is retrieved from the database and displayed in order by date of most recent sighting.**
5. **Process can be repeated for either Report OR Find as often as needed in a single session.**

Notes

Deployment
IDE Execution and MySQL Database
